Featured Application Story I-7186 as Voyage Data Recorder

The Simplified Voyage Data Recorder is a programmable controller that works as a GPS (Global Positioning System) receiver. It is equipped with an external antenna, and will receive GPS satellite signals. A built-in decoder converts the signals into position, velocity, and time estimates. Processed information such as date, time, speed and position, etc, will be kept inside the receiver on 8M bytes (or greater) flash memory (allows storage of more than 100,000 records). [Click here](#) to read all about it.

- **Easy installation:** Wiring reduction due to adopting Ethernet LAN Quick onboard setting for operation Light weight & space-saving units
- **Easy maintenance:** Wide input voltage range provides flexibility -runs on any voltage from 10v-30v DC Provide plug & play simplicity Low power consumption
- **Real-time monitoring:** GPS information (date, time, speed and position, etc) provides real-time monitoring
- **Reliability:** Robust, industrial grade design and IP-66 rated protecting case ensure long-life operation and reliability for harsh environment.
- **Applications:** Distance trails, voyage track or other applications for passenger ships, merchant ships,

Special Promotional Pricing June 2007

USB to RS-232/422/485 Converter

I-7561: \$115.00

ICP DAS USA is proud to announce a special **promotional** offer to all recipients of our bi-weekly mailer! This month, we will be offering our [I-7561 USB to RS-232/422/485 Converter](#) at a reduced cost. This offer is extended to ICP DAS clientele*. For more information, be sure to visit [our web site](#) today! Be sure to act now; as pricing is set for a limited time only!

I-7561 Features:

- Allows the transfer of serial data over USB
- High Speed 115.2 KB/s transmission rate.
- Contains a "Self Tuner" Chip that auto-tunes the baud rate and data format to the RS-485 network
- Derives power from the USB port-- so does not need a power adapter.
- True "Plug and Play" device: No dip switch is needed to configure this module.
- Can bring up to 256 RS 485 devices on the same RS 485 bus. (Traditional converters only bring up 32 or 128 devices.)
- [I-7561 page](#)

*Offer not valid for resellers and distributors.

fishing vessels, vehicles, and aircrafts, etc.

Featured Product Internet/Ethernet Controller

I-7186EX has one serial RS-232 port and one RS-485 port. Ethernet support is provided by a NE-2000 compatible controller with 16 KB of on-chip buffer memory and 100Base-T media interface.

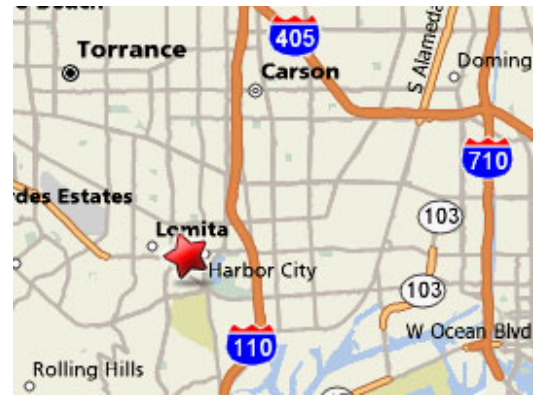

- Can operate as a GPS Receiver
- Supports a variety of TCP/IP features including: TCP, UDP, IP, ICMP, ARP
- CPU : 80186, 80 MHz
- SRAM : 512 KB
- Ethernet port : 10/100Base-T
- User Defined I/O Pins: 14

We Moved! Feel Free to Visit us at our LA office!

We would like to inform you of our new location . Our phone and fax numbers have remained the same for your convenience. Please update your records. Please see our address and full contact information below:
