Set Communication Parameters of the Generator to ‘Slave 1’
Set Communication Parameters of the Transfer Switch to ‘Slave 2’
Connect both Generator & Xfer switch (in parallel) to Port 2 of the 7188EX
To Ensure Proper Communications, Set the 7188EX Baud Rate to 19200, 8, N, 1 via the unit’s Web Interface.
Making Data Acquisition Easy

COM Port 2 of the 7188EX Maps to Virtual COM Port 7 in this picture. Your mapping will likely differ.
Under ‘Network’ Online Configuration – Set your COM Port # based on what you have mapped to 7188EX Port 2
Device Properties – Set the Appropriate Slave Addresses for each Device
After Configuration is complete – Press ‘Go Online’
Both devices should now show “Online: Good”
