

EEPROM

The 8080 is equipped with 128bytes (64 words) of EEPROM, allowing the user to save both system and channel configuration data.

The read/write units for EEPROM are 2bytes, the address 0~31 of EEPROM is for user design, and address 32~63 is used by 8080 system configuration. The limitation of EEPROM can be rewrite 1,000,000 times.
